

## IQMotive

IQMotive b.v. is a young company (founded in 2015) that builds intelligent and integrated planning software.

So far IQMotive has focused on planning solutions for workshops and bodyshops in the automotive industry. The big difference with existing planning solutions is that IQMotive makes it possible for the planning to be fully automated by using smart algorithms.

## IQPlanning

Our solutions, **IQPlanning Basic** (manual and basic automated planning) and **IQPlanning Pro** (fully automated planning with possibility for manual overrides), can be linked to and fully integrated with the Dealer Management Systems (DMS) that are used by dealerships. Our planning solutions are not only completely integrated, they are proactive and they support the dealership's business operations as well. IQPlanning Basic (IQP Basic) and IQPlanning Pro (IQP Pro) are web based SAAS applications and upwards / downwards compatible.

Both our solutions can deal with:

- multi-point dealerships as well as single-point dealerships
- online planning
- planning in teams
- taking employability restraints into consideration
- multi shifts
- replanning (parts of) the workorder
- courtesy cars: assigning courtesy cars to workorders and these cars will be planned as well.
- different statuses of workorders and tasks: it is possible to start, pause, postpone and finish workorders or tasks in the DMS or in IQPlanning. Either way, the status will be shown automatically.
- generated management information (productivity, efficiency, etc.)
- customisation: IQPlanning offers an easy to use so called "logic editor", that enables you to build your own processes, based on variables and data from the DMS (for instance, assign cars older than 20 years to a certain mechanic or plan extra time for a specified car type)
- OEM policies (for instance VPS (Volvo))

## Extra features IQP Basic

- assigns workorders to mechanics (or teams of mechanics) in a **basic way automatically**
- if you plan manually, IQP Basic supports you by showing which mechanics have the right skill(s) to perform the workorder.

## Extra features IQP Pro

- Plans workorders and assigns tasks to mechanics (or teams of mechanics) complying with necessary skills in the most **efficient way automatically**
- **optimises** the planning instantly when requested (for instance when a mechanic gets sick, a customer doesn't show up, delays in repair etc.).
- will always try to plan in a way that the handover time to the customer will be met, and will warn you when this is no longer possible.
- although IQP Pro plans for you automatically, it is always possible to **override** the planning manually.
- Is **self-learning** when it comes to productivity of the employees and takes this productivity into consideration during automatic planning

## GDPR

- the IQMotive software is GDPR compliant. When requested we can provide a GDPR compliancy statement.
- Data is stored in the DMS. IQMotive software will use relevant data during the planning process, but not save it afterwards. Only anonymous plan data will be stored.
